SUMMARY

Web development student at Cornerstone International Community College (CICCC) in Vancouver building full-stack TypeScript applications. Shipped projects with Next.js, Astro, and React on the front end and Express, Socket.IO, and PostgreSQL / Supabase on the back end, deployed to Vercel. Experienced in team development with Git and GitHub and open to full-time roles from January 2027.

PROJECTS

Trim Team Booking App | Lawn-care booking platform (team) | *Vancouver, BC* | GitHub Sep 2026

- Built the staff dashboard for a Metro Vancouver lawn-care business's booking app with Next.js (App Router), TypeScript, Tailwind CSS, and Neon Postgres, so customers book without an account and staff manage jobs after signing in.
- Implemented booking list, detail, and edit views with filters by status, city, and lawn size, plus confirm, complete, and cancel actions that lock finished bookings from further edits.
- Protected staff routes with signed cookie sessions; live at trim-team.vercel.app.

Unsplash Landing Page Recreation | Responsive Next.js site (individual) | *Vancouver, BC* | GitHub Sep 2026

- Recreated Unsplash's landing page as a responsive Next.js (App Router) and TypeScript site, with each section a typed component receiving content as props.
- Connected an email signup form to Web3Forms and stored subscribers in a Supabase Postgres table through a server-side service-role key.
- Deployed on Vercel at unsplash-keisei.vercel.app.

Player Performance Explorer | Full-stack PostgreSQL app (individual) | *Vancouver, BC* | GitHub Jul 2026

- Built a full-stack app for FIFA World Cup 2026 player match data with an Astro SSR front end, an Express API in TypeScript, and PostgreSQL via a pg Pool.
- Implemented full CRUD, server-side pagination, player-name search, filtering, and sorting, plus a rankings endpoint that JOINs players and performances with aggregates.
- Used parameterized queries throughout and documented the normalized players / matches / performances schema.

Real-Time Chat App | Full-stack WebSocket app (team) | *Vancouver, BC* | GitHub Jun 2026

- Bootstrapped the team's real-time chat app as its first PR: an Express MVC backend (routes, controllers, models) with Socket.IO and an Astro + Tailwind CSS + TypeScript client.
- Built per-message actions: copy, delete locally (kept hidden across history reloads), and unsend for everyone, broadcast to all clients via Socket.IO events.
- Added a leave-room button with join/leave system notices and made Random a built-in default room; merged 4 PRs.

EDUCATION

Diploma Program – Web Development (In Progress)
Cornerstone International Community College, Vancouver, BC Jan 2026 – Present

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, SCSS, SQL

Frontend: React, Next.js (App Router), Astro, Tailwind CSS

Backend: Node.js, Express, Socket.IO, REST APIs, cookie-based sessions

Database: PostgreSQL (node-postgres), Neon, Supabase

Tools: Git, GitHub, Vercel, Web3Forms

LANGUAGES

Japanese (Native) | English
